

Still asking your patients... "Are you feeling numb yet?"

Go to work with confidence!

Buffer your local anesthetic with Onset.

Test with Endo Ice.

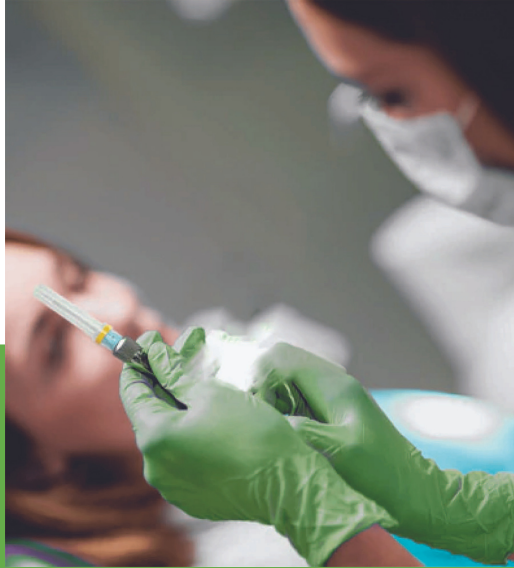

Tell the patient they are numb.

Go to work with confidence!

WHAT IS IMPORTANT TO YOU?

- Predictable, profound pulpal analgesia in less than 2 minutes? Test it with Endo Ice!
- More comfortable injections?
- Time savings?
- Consistency from patient to patient?
- Improved office flow and reduced stress?
- Success in the presence of infection (hot teeth)?

BUFFER

Use the Onset Mixing Pen to raise the pH of your local anesthetic cartridge to physiologically neutral in 3 seconds.

LOAD

Load the buffered anesthetic cartridge into your standard dental syringe.

INJECT

Deliver the buffered local anesthetic using your standard dental syringe and your usual injection technique.

**You'll never again need to ask,
"Are you feeling numb yet?"**

Scan the QR code to see how simple it is to buffer your local anesthetics with Onset!
